Charge from Council

Directing the Office of City Coordinator to work with stakeholders, review policies from other cities, review and incorporate results from the minimum wage study, and recommend a minimum wage policy to bring before the City Council Committee of the Whole by the second quarter of 2017
What We Heard: listening sessions

- Listening sessions reached 550 people
- Online survey with 1759 responses
- 115 written comments and letters

**Business & neighborhood organizations**
- Jan 24: Latino Community

- Mar 16: Minneapolis Youth Congress
- Mar 24: Nonprofit workers
What We Heard: listening sessions

• Should be a statewide solution
• Government should not tell businesses how to run their operations
• It’ll hurt businesses, & restaurants in particular

Majority of voices fell in between: we believe in doing right by our community, but are concerned about timing, ability for us to accommodate a new increase, and how it may impact specific categories of workers or businesses

• We can’t afford to live and feed our families on current minimum wage – we need action now
• Where cities have acted, counties and states have followed
• This is one way to help address issues of affordability, particularly with housing
What We Heard: survey demographics

**Employer/Business Profile**
- Food service, hospitality, and retail were the top responding industries and represent 63% of the employer respondents.
- 73% have 49 employees or less, 38% have between 10 – 49 employees, and 35% have 9 employees or less.
- 55% employ workers that earn tips or commissions and 55% of their tipped or commissioned employees work part-time.

**Employee Profile**
- Largest group of respondents:
  - Food service - 25%
  - Non-profits - 12%
  - Government - 11%
  - Hospitality - 10%
  - Other = 14%, of which 36% were in education
- 70% do not receive tips or commission as part of their pay
- 79% work full-time
- 67% earn more than $30,000 annually
- 57% said their hourly wage is more than $15.00
- 70% do not receive tips or commission as part of their pay
- 79% work full-time
- 67% earn more than $30,000 annually
- 57% said their hourly wage is more than $15.00
50%: no exemptions based on business type or industry (though in other comments, exemptions for small businesses and nonprofits should be considered)

47% favored a statewide approach, 8% favored a Minneapolis only policy and 21% stated they were not in favor of a municipal minimum wage policy

Of the 409 respondents, 73% feel the policy should be phased in over 2 or more years

63%: strongly in favor or somewhat in favor of an increase in the current minimum wage

A number of respondents noted that using the $500,000 revenue threshold to define large vs. small businesses was not an adequate way to classify businesses and that employer size should be calculated differently

Feedback regarding whether or not tipped employees should be included in a policy was fairly equally mixed, which is similar to what was heard in community listening sessions

Of those responding to how an increase in minimum wage would impact their business, 48% said they would have to decrease their workforce, 29% said it would not impact their workforce, 18% said they were unsure and 5% said it would increase their workforce
What We Heard: business surveys

Staff also received survey responses from several business associations:

Southwest Business Council
- 246 business respondents
- 61% said a raise to $15 would be a very negative impact to their businesses

Lake Street Council
- 13 respondents
- 92% stated that an increased minimum wage would cause them to decrease their workforce
- 69% of respondents stated that if there was a policy change they would prefer that it be phased in

Minnesota Restaurant Association
- Based on October 2016 snapshot of 83 locations
- Average hourly earnings:
  - Cooks: $13.67
  - Support: $12.55
  - Tipped: $28.51
Residents want a city in which they can have a quality of life that allows them to care for their families, be healthy, live in safe housing, pursue education and personal growth.

Residents want a Minneapolis with thriving businesses, the opportunity for individuals to work, and some assurance that work leads to compensation sufficient for people to live well in their communities.

There was overwhelming agreement that national or state policymaking would be a better approach on this issue, but also heard that as seen in other jurisdictions, where larger cities like Minneapolis lead, states often follow suit.

Businesses concerned with the ability of the region to sustain a local minimum wage policy and the unintended consequences that could arise (hiring less workers, wage compression, reduction of hours, automation etc.)

Businesses shouldn’t be the only ones to bear the economic burden: “communal issues require a communal response”
What We Learned

Shifting gears, we looked at what data was available:

- Wilkins Study
- Summaries of key policy studies and other sources
- Summary of peer municipal/county actions on minimum wage
- Minneapolis workforce and economy summary data
- Health impacts research (by Minneapolis Department of Health and others)
- Collection of all community input
Based on 2014 data, about 47,000 would be affected by an increase to $12 per hour and about 71,000 would be affected by an increase to $15 per hour – this was further broken down by key demographics:

- Latino workers: 39% would benefit from an increase to $12/hr and 54% would benefit from an increase to $15/hr
- Black workers, 27% would benefit from an increase to $12/hr and 41% would benefit from an increase to $15/hr
- White workers, 10% would benefit from an increase to $12/hr and 17% would benefit from an increase to $15/hr

Minimum wage earners in Minneapolis “often have at least some college education; are not currently in school; work at least 35 hours per week; and, are over age 25.”
What We Learned: Wilkins Study

The study shows that in Minneapolis, the possible effects of a wage increase could mean an increase in wages up to 28% for some workers and possible employment loss of up to 3.3% for some industries.

What We Learned: our economy

• Fed. Poverty thresholds for 2017:
  • 1 person: $12,060
  • 2 persons: $16,240

• 1 person making $7.80/hr earns ≈ $16,224 (about 8% of workers in Minneapolis or 40,000 per Wilkins Study)

• 1 person earning $15/hr earns ≈ 31,200 (23% of Minneapolis workers earn less than this per Wilkins Study)

• Living wage in Hennepin County per DEED:
  • Family of 2 adults (1 FT, 1 PT) + 1 child = $19.80
  • Single person = $15.25
  • Single adult + 1 child = $29.87
What We Learned: topical studies

• **Widely varied and frankly, inconclusive** – in large part b/c local & regional economies are not based on a single variable – existing wage levels.

• **Economies are impacted by all sorts of different factors** like business and population growth, the trends of their particular industries, how quickly their region is embracing technology etc. For example, we heard a lot with the restaurant industry that a raise in minimum wage levels will lead to automation. The reality is that the industry has been having this conversation for over a decade now as technology has advanced and companies, particularly the fast-food industry, are looking for ways to lower their overhead and cater to a new breed of customers who are use to home delivery & app-based ordering.

• Not enough jurisdictions have studied actual impacts as most have started within last 2 years (42 out of 51/82%).
What We Learned: topical studies

• Univ. of Wash:
  ▪ City’s low-wage workers did relatively well, but largely because of strong economy
  ▪ Also noted their results show only the short-run impact of Seattle’s increase to a wage of $11/hour and are not reflective of the full range of experiences for tens of thousands of individual workers

• 2011 CEPR study increase in San Fran (to $8.50 at the time), Santa Fe and DC:
  ▪ San Fran and Santa Fe results for fast food, food services, retail, and low-wage establishments show minimum wages can raise the earnings of low-wage workers, without a discernible impact on their employment
  ▪ But wage increase in DC was too small to raise wages in fast food, food services, retail, and other low-wage establishments, and thus inconclusive

• NELP done several on cities, but many of those are academic and not based on actual impact of implementation.

• Card & Kreuger did a study on fast-food industry in NJ and PA in 1994 based on increase from $4.25 to $5.05 so not directly comparable to current trends
What We Learned: health impacts

Numerous studies have linked economic status or disparity to health:

- 2016 study looked at premature mortality rates of New York City residents post $15 increase and concluded “results are consistent with the pervasive robust links found between premature mortality and low life expectancy and poverty and low income found in numerous other studies.”

- 2017 study concluded an increase minimum wage by just a single dollar could reduce adolescent birth rates among 15-19 years olds by 2% - possibly about 5,000 fewer births to teen parents across the United States.
What We Learned: health impacts

Minneapolis Dept. of Health issued a policy paper in late 2016 that similarly highlighted the link between health and income:

• “The strongest predictors of health status are the factors that are known as social determinants of health. These factors include educational and employment opportunities, housing, transportation options, neighborhood safety, and access to recreation areas and food options that support a healthy lifestyle.”

• “Poverty is concentrated among people of color, children, people with lower educational attainment, and female-headed households. Policies that affect household income — especially among the lowest earners — could have a substantial benefit for city residents. Higher wages for some families may mean parents can work fewer jobs or hours....Better economic conditions for Minneapolis families mean longer and healthier lives, and ultimately more stable communities.”
In Summary...

- An increase in minimum wage will likely impact many of our low wage workers, particularly low wage workers of color.

- Peer cities and topical studies have been illustrative, but not conclusive: implementation is too early to really know impacts of a minimum wage increase.

- Businesses, particularly restaurants, have expressed great concern about moving forward with a municipal minimum wage policy and have urged us to think about particular considerations that would make implantation easier.

- While understanding that adopting a municipal wage policy will result in spreading additional costs to employers and customers, the continuing gap between the current state minimum wage and the actual cost of living and raising a family in the City is a significant ongoing economic stressor to local workers and to our community that has a real social and public cost.
Recommendations: scope

Applies to:

• Employee: anyone who works in Minneapolis for any amount of time consistent with state law

• Employer: pending review from the City Attorney’s Office, any business regardless of business location

Additional considerations may be adding clarifying language as in Oregon or adhering to exemptions in state law re min. wage that include casual babysitters, independent contractors, bona fide executive/administrative/professional personnel, independent state or federal employers etc.
Recommendations: wage level

Adoption of a universal or absolute wage level to be indexed to inflation after we’ve reached the initial target wage, with a range between $12.49 (peer region index approach) - $15 (current national trend)

For any wage level selected we also recommend a multi-year phased-in approach to allow for businesses of all sizes to accommodate and adjust to new minimum wage increases
Recommendations: phase-in period

Tiered phase-in at no less than 4 years, with longer phase-in for smaller businesses

**Peer city research:**

- 26 other jurisdictions phased in their policies between 3 and 4 years
- Additional 10 jurisdictions extended implementation timelines to 6-8 years for specific groups/industries (tipped vs. non-tipped, small businesses vs. large, nonprofits and youth workers)
- Of the 15 jurisdictions that phased in their policies with an eye towards establishing a universal or absolute wage level
  - 3 (New York, Seattle and Oregon) allowed for a 3-tiered approach
  - 7 (all in CA) included a 2-tiered phase-in for smaller businesses
  - 6 allowed included a 2-tiered phase-in for non-tipped employees, youth or nonprofits

In our survey, 73% of respondents preferred a phase-in period of at least 2+ years
Recommendations: tipped wage level

One of our hardest decisions as we struggled with the issue: jurisdictions are split (27 or 53% opting not to include tips), community voices were split and it’s a policy choice that has no “right” answer.

There is no consensus on the issue

• MN Restaurant Association did a sample survey that include 83 locations around the City based on October earnings – that showed average earnings of $28.56/hour.
  ▪ BUT: with over 830 restaurants, cafes, and bars in the area, this reflects only 10% of industry and perhaps not the entire range (high end to low end, pricewise)

• Bureau of Labor Statistics looked at data spanning almost 3 years (Nov 2012-May 2015). Results state median wage = $8.98 and average wage = $10.29.
  ▪ BUT: this takes into account all restaurants in Minneapolis-St. Paul-Bloomington area, not just Minneapolis so wage numbers could be underrepresented

• Calculations from the Restaurant Opportunities Centers based on 2015 US Census Bureau data for food preparation and serving-related occupations estimate $12/hour in Minneapolis as a median.

Additional considerations that make pinpointing an average wage difficult:

• Wages can vary from week to week and shift to shift so not everyone is able to make the same “minimum” amount
• Not all tips are recorded. Even credit card tips are hard to determine as they can be “cashed out” (distributed to servers at end of shift and may or may not end up in wage records filed)
Recommendations: tipped wage level

Ultimately persuaded by:

- Studies that spoke to uneven and difficult enforcement that put the onus on employees to claim lost wages
- Fact that our state legislature opted for a single wage system in 1984

Recommend tips not be included as wages for purposes of minimum wage
Recommendations: youth workers

• Also split down pretty even amongst jurisdictions

• Minneapolis youth labor force – any resident 16-19 years old working or looking for work is ≈22,000

• The estimated unemployment rate for this demographic is considerably higher than other age demographic groups at about 27%

• Businesses often mentioned the need to include a training wage

We recommend following state guidelines and establish a training wage that may be paid to youth up to ages 20 years for no more than 90 days – most jurisdictions set this subminimum wage to 85% of the minimum wage
Recommendations: small business

Extend implementation for smaller and micro businesses, with an additional 1-2 years to reach the targeted minimum wage
Supplemental Recommendations

• Recommend housing enforcement with Civil Rights Department

• Annual evaluation of implementation results and monitoring of impacts on businesses and workers to ensure increases can be sustained by local economy and that we address any unintended consequences in a timely manner.

• Continue to provide small and entrepreneurial businesses with support so they remain economic drivers to our local economy.
THANK YOU!

We heard from businesses, workers, community members, and many others who all want a strong, inclusive, vibrant and healthy Minneapolis.
